Project Scope

This historic site now accommodates a market place shopping centre and one of Australia's largest cinema and entertainment complexes. The complex is supported by a 2000 space car park and other commercial outlets located in the car park.

Significant civil engineering works were initially carried out to achieve appropriate site contouring to accommodate site drainage and minimise removal of material from site.

The entertainment complex was constructed first, which incorporated 20 cinemas and a number of related entertainment tenancies. The building arrangement included precast concrete perimeter walls, steel framed acoustic dividing walls, and a steel framed roof.

The construction of the Market Place Shopping Centre followed the cinemas and incorporated a Safeway Supermarket, Big W Store and forty specialty tenancies.

The whole complex compliments the Sunshine Shopping Centre precinct and is linked by landscaped walkways and external landscape features.

The installation of major infrastructure, including duplication of a main sewer under the buildings and the design of a downstream retarding basin were all part of Cardno Grogan Richards

involvement in the project.

Cardno Grogan Richards had a presence on site for the duration of the building works which spanned nearly two years, to ensure the works were installed in accordance with our structural, civil and hydraulic documentation.
